

My Film Viewing Map

How to use the film viewing map

- When you watch a film made in each continent of the world, shade that area of the map.
- As you begin to complete your map, use the Into Film website and talk to your film club leader about films you could watch to complete your map. www.intofilm.org/films
- To add more detail, add the countries where the films are made. If you want to find out more about

where the films you watch are made use the Into Film website and search for the film title or use www.imdb.com.

- You might like to work with other film club members to design different displays that show the different types of films you watch in film club.

You can also use the **My Film Viewing Timeline sheet** to record the films that you watch and set yourself new film watching challenges.
